

AMENDMENTS TO THE SPECIFICATION

Please replace the Paragraph on Page 4, Lines 2 - 13, with the following amended Paragraph:

The first channel 495 may be passed through by a first connecting line 44 having a conductive feature, two side ends of the first connecting line 44 being electrically contacting a part of surface of the first electrode ~~[[44]]~~ 43 and a controller 60, such as a column driver, row driver, and central controller, respectively. Further, the controller 60 is provided to control the function of whether the power is supplied or not, such that the controller may control and determine which first electrode 43, formed at a specific position, may be supplied power. Likewise, The second channel 497 may be passed through by a second connecting line 48 having a conductive feature, two side ends of the second connecting line 48 being electrically contacting a part of surface of the second electrode 47 and a controller 63, such that the controller 63 may control and determine which second electrode 47, formed at a specific position, may be supplied power.
